

GoldMine Version 6.70.50123 for Windows 98/Me/2000/XP/2003

WHAT'S NEW

GENERAL

New: Localization settings allow users to use GoldMine in double-byte environments, such as Chinese, Korean or Japanese Windows. New settings are controlled via `GM.INI` entry and are all on by default on double-byte systems, except where noted. Settings list follows:

[GoldMine]

RndDBCSSafeChar=1/0 (default is 1 – on)

HTMLEnableUTF8=1/0 (default is 1 – on)

UseSpecialAccNo=1/0 (default is 1 – on)

CalDayHeaderDateFormat=*dddd yyyy'XX'M'YY'd'ZZ'* (where *dddd* = long day name, e.g. Monday; *yyyy* = 4 digit year; *'XX'* = custom separator/label; *M* = numeric month, e.g. 1 – 12; *'YY'* = custom separator/label; *d* = numeric day, e.g. 1 – 31; *'ZZ'* = custom separator/label.

FreeBusyHeaderTimeFormat= See *CalDayHeaderDateFormat* entry

FreeBusyHeaderDateFormat= See *CalDayHeaderDateFormat* entry

UseGMDefaultDateFormat=1/0 (default is 0 – off)

NOTE: Database collation must be set to the desired language by which data should be sorted.

PALM/VISOR/POCKET PC and OUTLOOK

New: Option to uninstall or remove GoldMine Palm synchronization conduit. Accessible via **File >> Synchronize >> Synchronize with Palm/Treo...** main menu option (ITS 16294).

SYNCHRONIZATION

New: Ability to **limit merge forms and InfoCenter linked documents** inclusion based on owning **username(s)** (ITS 38016). (Applies to MS-SQL only)

Requires the following `GoldSync.INI` setting:

[GoldSync]

LimitInfoAndForms=1 (default is 0 – off)

NOTE: Filter is applied by selecting the desired username(s) from Calendar username listing in Send Options.

WHAT'S CHANGED

GENERAL

Changed: Calendar and Free/Busy publishing capabilities now accessible via new calendar local menu options **Options >> Publish Calendar(s)** and **Options >> Free/Busy Times**.

E-MAIL

Changed: Automatic **refresh** of **E-mail Center Inbox** will not move user to top of e-mail listing (ITS 14075).

SYNCHRONIZATION

Changed: Linked documents are now compressed in **bulk** to optimize process (ITS 38016).

Changed: Transfer set creation process for including unlinked e-mail messages has been optimized.

WHAT'S FIXED

GENERAL

Fixed: iCalendar import issue where updating exceptions on a recurring activity series would fail.

Fixed: Issue where attempting to add a contact to an **Organization Tree** while contact record window was maximized caused the **Organization Tree** area to become blank (ITS 14719).

Fixed: Data entry issue where zeros were removed from values in numeric user-defined fields (ITS 14719). (Applies to dBASE installations only).

Fixed: Uninstall issue where removing GoldMine removed all FrontRange Solutions related registry keys, including those for other FrontRange products.

E-MAIL

Fixed: Issue where users were not able to access **Outlook** e-mail data via **E-Mail Center**.

REPORTS

Fixed: Invalid page fault error when attempting to consecutively generate the same Crystal Report (ITS 16236).

PALM/VISOR/POCKET PC and OUTLOOK

Fixed: Issue where Palm linked activities would not remain linked in GoldMine if the linked contact contained a value in the extension field (ITS 16272).

SYNCHRONIZATION

Fixed: Issue where **Syncstamp** values were not being updated to reflect the retrieval date/time (ITS 12756).

Fixed: Issue where uploading/downloading a large linked documents file (ldaxxxxxx.gts) would fail and return the following error message:

```
waitOnSocketLine() failed.  
sData did not start with '+FILE'
```

ADVANCED

Fixed: Issue where **WriteDetails** API function could corrupt the NV entries.

Fixed: Issue where executing multiple NV calls did not return all available data.
